

# WELD PURGE MONITORS® Filters for PurgEye®

## 200, 500 Desk, 600 Touch, 1000 Remote and 1500 Site

- Replacement filters are needed with **PurgEye® 200, 500 Desk, 600 Touch, 1000 Remote and 1500 Site**, all of which are fitted with internal pumps.
- These Weld Purge Monitors® use a filter to give the zirconia cell protection and preserve life.
- The filters need to be replaced regularly, particularly if being used in an area with a lot of dust or fumes. If the filter isn't white and shows discolouration, it needs changing.
- Without these filters, the sensor will become contaminated causing it to become less effective, leading to a premature and unnecessary early replacement.
- By using these filters you can preserve the life of your sensor dramatically.
- You can purchase them from any authorised HFT® Distributor or check directly with Huntingdon Fusion Techniques HFT®.
- Available in packs of 10.
- Immediate delivery.
