

## Inflatable Weld Purging System

- The Systems are ideal for purging heat treated chrome steel pipe joints and high strength stainless steels where the temperature may reach as high as 300°C (572°F).
- Each System incorporates **RootGlo®**, a band around the centre for positioning purposes, which will glow up to 20 hours inside the pipe with only 10 minutes exposure to light.
- **PurgeGate®** is fitted to every **HotPurge®** System to prevent Dams from bursting due to over inflation.
- Each System is manufactured to meet a specified internal diameter and has an expansion range of  $\pm 12$  mm.
- **IntaCal®** technology is included to eliminate complicated valves and valve setting procedures.
- Strong, rugged construction with multiple stitching and kevlar thread to add extra strength.
- Sizes from 6 - 88" (152 - 2,235 mm).
- Multiple outlets disperse weld purge gas evenly without turbulence.
- Suitable for the welding of preheated and post-weld heated pipework, such as CMV, P11, P22, P91, P92 and high strength stainless steels.
