RE : EXPANDING STOPPERS

Dear Sir

Thank you for your recent supply of 225mm expanding pipe stoppers which we purchased on behalf of our customer.

The feedback that we received from the contractor was very good in general. The application involved was the air testing of some 237mm internal diameter upvc sewer drain.

They had experienced problems with off the shelf test stoppers as they are more suited to clay ware pipes which have an internal diameter of 225mm.

As I have said the customer was very happy with the stoppers that we supplied and reported no problems at all. The rubber seal expanded in a uniform manner which led to a perfect airtight seal and the winding mechanism which is used to expand the plug operated without any problems and was easy to use.

We thank you once again for the materials supplied and would have no hesitation in recommending your company and products to anybody.

Yours Sincerely

PAUL QUIN
Director
